

Please just consider making the system simple. I propose the following:

**No shelters:**

All individuals pay 10 to the federal government and 8 to the State. 6% of the Federal Government portion goes to SS. The rest is used for defense and all other aspect of government spending. No money from the Fed is used at the state level on Education – however the Fed still had Macro control over seeing that states follow guidelines. Corporations pay the same amount. All of this is paid on gross income – not earned income.

People below the official document yearly poverty line – of gross income – pay 50% less to federal government. Not state however – at state level they pay same as everyone else as they are going to still receive other benefits and should pay into those.

No other discounts. No child discounts – not interest discounts – no college discounts – no discount of any kind. Give everyone 5 years to work those out and then they are over.....

Corporations – if you have income from overseas – you pay tax on that income. If not – move!

This would be painful for me – but it would be something I would just have to get over; but it would be beneficial to my grandchildren!

Hey – if the % doesn't work – change them – but use the concept and don't monkey around with it so much! My point being – do you see any Reform Group below that says – Simple Reform Tax Code?

Charitable/Exempt Organizations  
Debt, Equity and Capital  
Education and Family Benefits  
Energy  
Financial Services  
Income and Tax Distribution  
International  
Manufacturing  
Pensions/Retirement
