

New Jersey Health Equity Facts

The U.S. Census Bureau estimates New Jersey’s population is **8,882,190**. Nationally, New Jersey ranks **20th in state health system performance**, according to the Commonwealth Fund’s State Health System Performance Scorecard.

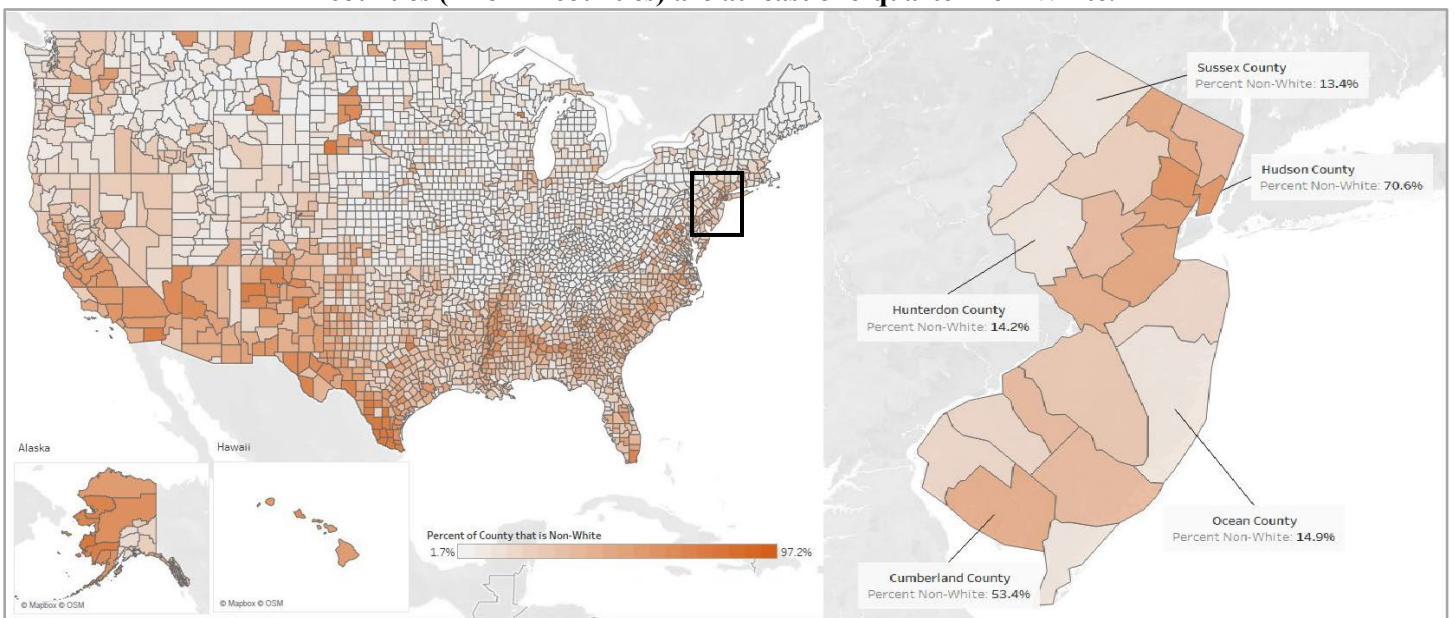

Key Demographic and Equity Metrics

	New Jersey Statistics	Compared to U.S. Average
White Residents	55 Percent of Population	Lower
Black Residents	13 Percent of Population	Higher
Hispanic or Latino Residents	21 Percent of Population	Higher
Median Household Income	\$80,088	Higher
Average Life Expectancy	80.5 Years	Higher
Uninsured Rate	7 Percent of Population	Lower
Maternal Mortality Rate	38.1 Deaths per 100K Births	Higher
Lack Broadband Access	1 Percent of Residents	Lower
Residents Living in Primary Care Shortage Area	28K Residents	Lower
Mental Health Workforce Shortage Areas	90.5 Percent of Counties	Higher
Adopted Medicaid Expansion (37 States Expanded)	Yes	N/A

Race/Ethnicity

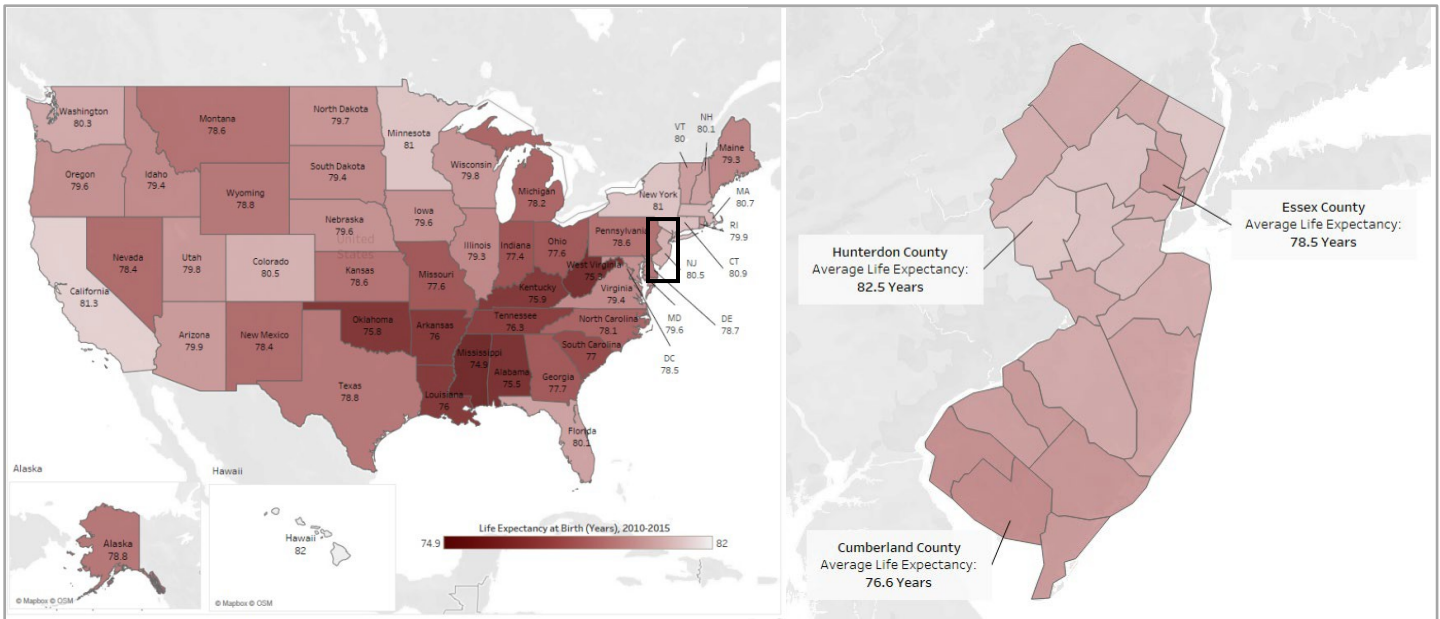

Racial health inequities persist among Black, American Indian/Alaska Native, Latinx, and Asian residents across the nation. Nationwide, 36 percent of all counties are at least 25 percent non-White. **In New Jersey, 67 percent of all counties (14 of 21 counties) are at least one-quarter non-White.**

Sources: County-level estimates retrieved from the American Community Survey 2018 *Race* datafile. Notes: Although the “non-white” categorization is used federally, some experts argue that the term Black, Indigenous, and People of Color (also known as BIPOC) is a more appropriate term than non-white.

Life Expectancy

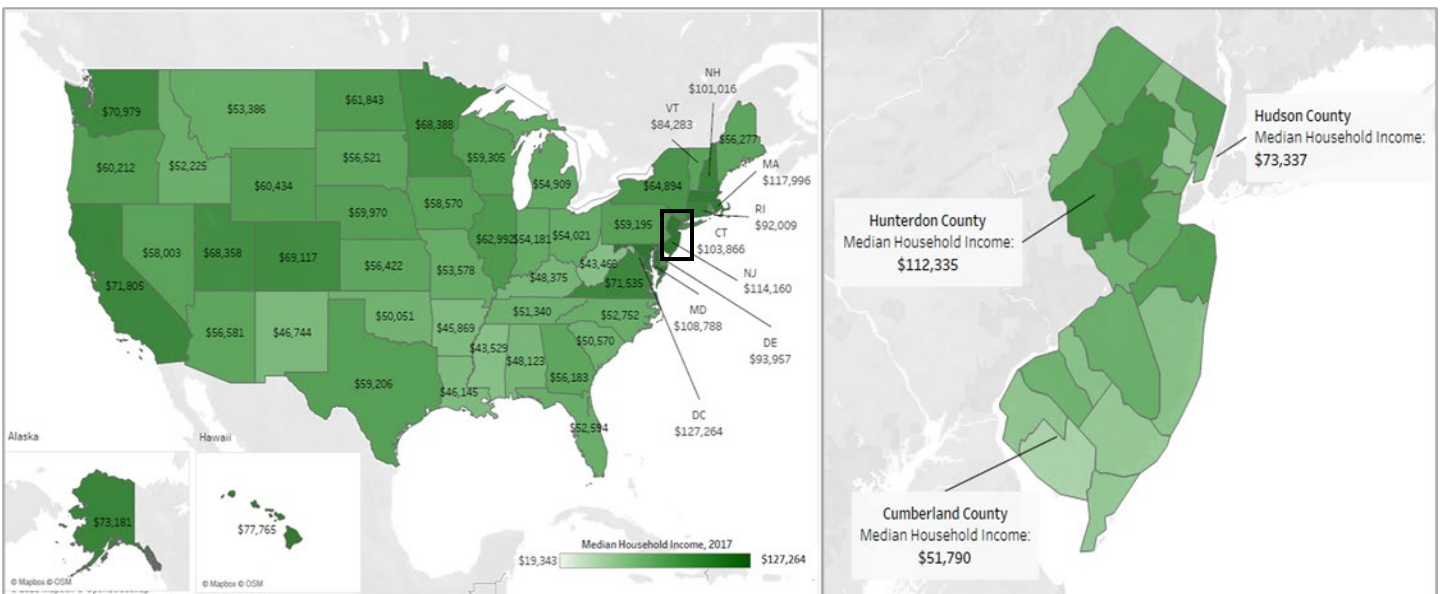

Life expectancy metrics can vary drastically by geography but are useful in examining how environmental, political, socioeconomic, and structural conditions impact health. **In New Jersey, the average life expectancy is 80.5 years, 2 years greater than the U.S. average life expectancy of 78.5 years.** In 6 of New Jersey's 21 counties, the average life expectancy is below the U.S. average – significantly lower in counties with higher proportions of non-White residents.

Sources: State-level life expectancy data retrieved from Kaiser Family Foundation *Life Expectancy at Birth* data; county-level estimates retrieved from the National Center for Health Statistics *National Vital Statistics System (NVSS)* datafile.

Income

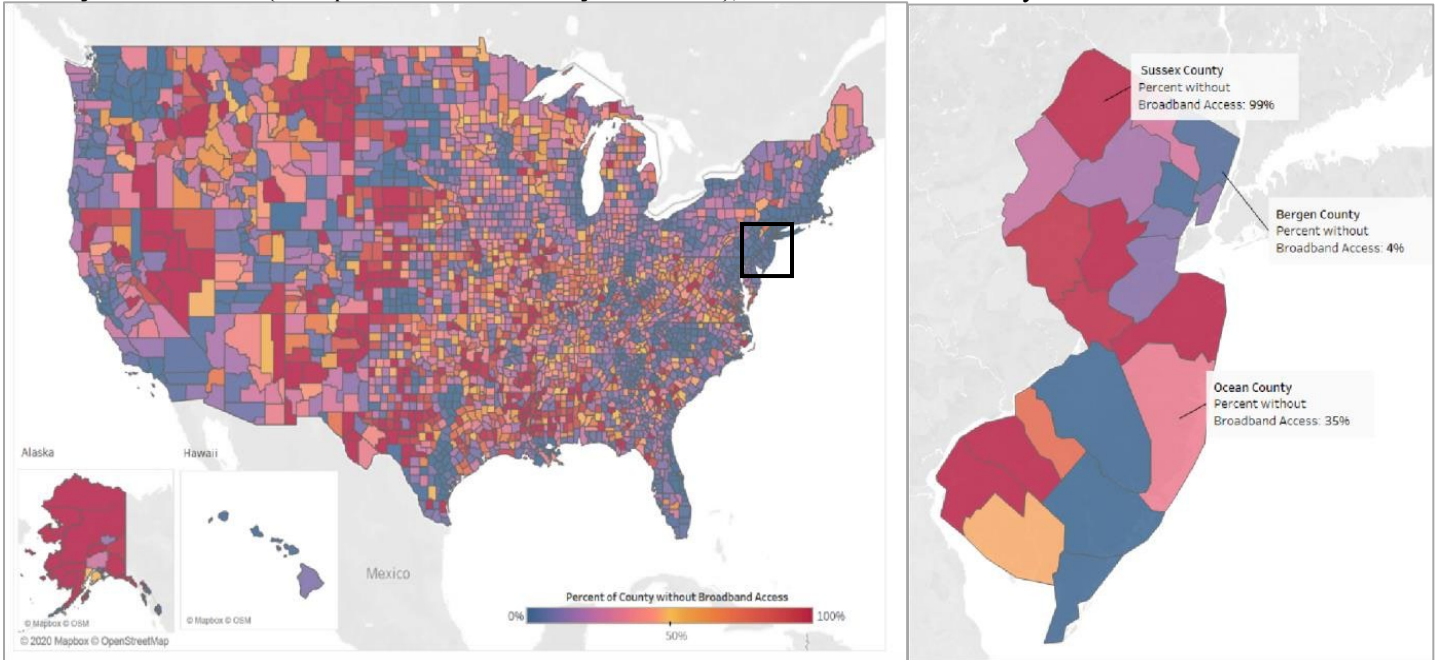

Higher income correlates with lower mortality and better health outcomes. **In New Jersey, the median annual household income is \$80,088, which is 32.7 percent greater than the U.S. median annual household income of \$60,336.** In 1 of New Jersey's 21 counties (4.8 percent of New Jersey's counties), the median annual household income is below the U.S. average.

Sources: State-level estimates retrieved from Kaiser Family Foundation *Median Annual Household Income 2017* datafile; County-level estimates retrieved from the United States Census Bureau *2014-2018 Median Household Income in the United States by County* datafile.

Broadband Infrastructure

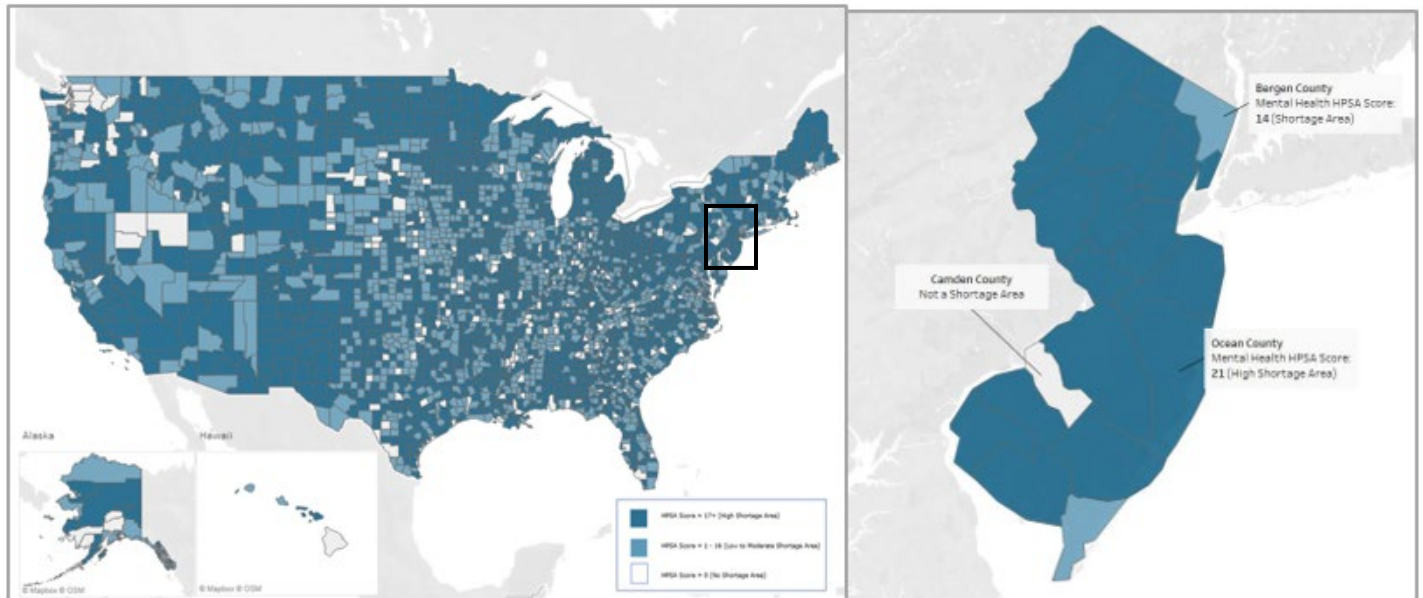

According to the Federal Communications Commission, 10 percent of U.S. residents lack access broadband – a trend that the Joint Economic Committee found to be more pervasive across communities of color. **Approximately one percent of New Jersey residents lack broadband access, compared to 6.5 percent of residents across the U.S.** In 8 of New Jersey's 21 counties (38.1 percent of New Jersey's counties), at least half of all county residents lack broadband access.

Sources: Federal Communications Commission (FCC) 2019 *Fixed Broadband Deployment* datafile.

Mental Health Workforce Shortages

The Health Resource and Services Administration (HRSA) designates geographic regions as health professional shortage areas (HPSAs) if they lack health care providers. Counties in New Jersey exhibit an average Mental Health HPSA score of 17.7 compared to the national average of 15.5 (on a scale of zero to 25, where 25 denotes an extreme HPSA shortage), **Ninety percent of New Jersey's counties (19 of 21 counties) are designated as mental health HPSAs.**

Source: Health Resources & Service Administration *HPSA Mental Health* Datafile.

Notes: HPSA Scores are developed for use by the National Health Service Corps to determine priorities for the assignment of clinicians. Scores range from 0 to 25 for primary care and mental health. Larger scores correspond to higher priority areas.
