

Texas Health Equity Facts

The U.S. Census Bureau estimates **Texas's population is 28,995,881**. Nationally, **Texas ranks 49th in state health system performance**, according to the Commonwealth Fund's State Health System Performance Scorecard.

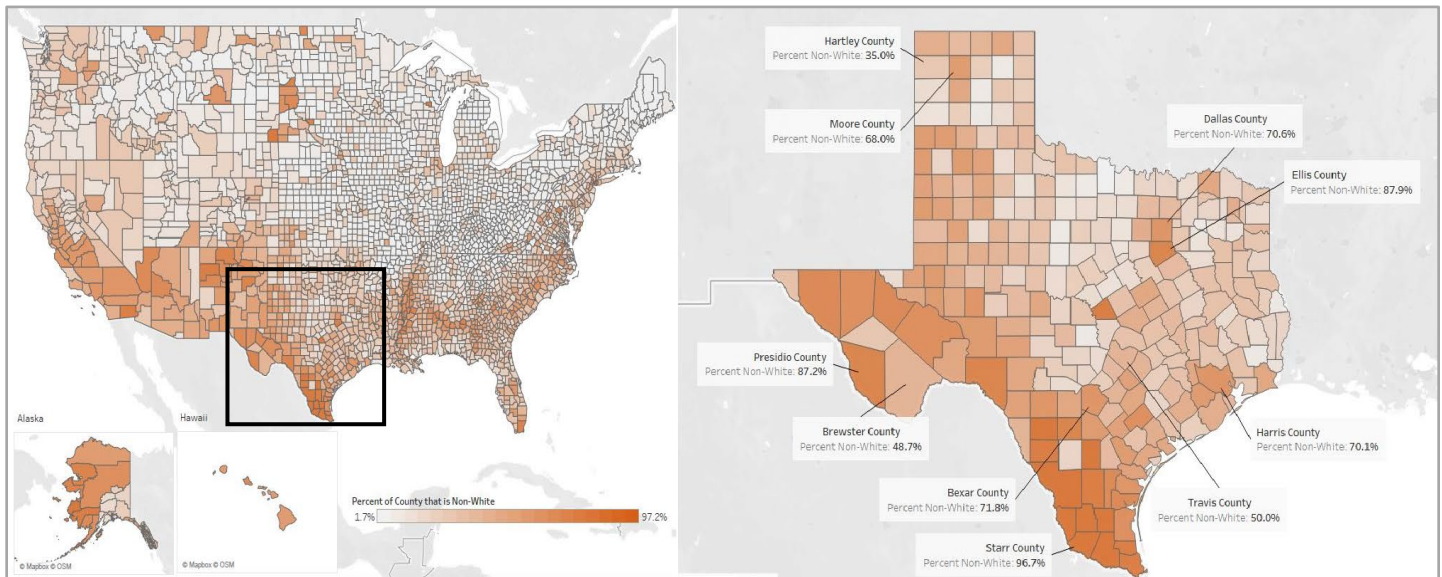

Key Demographic and Equity Metrics

	Texas Statistics	Compared to U.S. Average
White Residents	41 Percent of Population	Lower
Black Residents	12 Percent of Population	Lower
Hispanic or Latino Residents	40 Percent of Population	Higher
Median Household Income	\$59,206	Lower
Average Life Expectancy	78.8 Years	Lower
Uninsured Rate	18 Percent of Population	Higher
Maternal Mortality Rate	34.5 Deaths per 100K Births	Higher
Lack Broadband Access	7.3 Percent of Residents	Lower
Residents Living in Primary Care Shortage Area	6.48M Residents	Higher
Mental Health Workforce Shortage Areas	32.3 Percent of Counties	Lower
Adopted Medicaid Expansion (37 States Expanded)	No	N/A

Race/Ethnicity

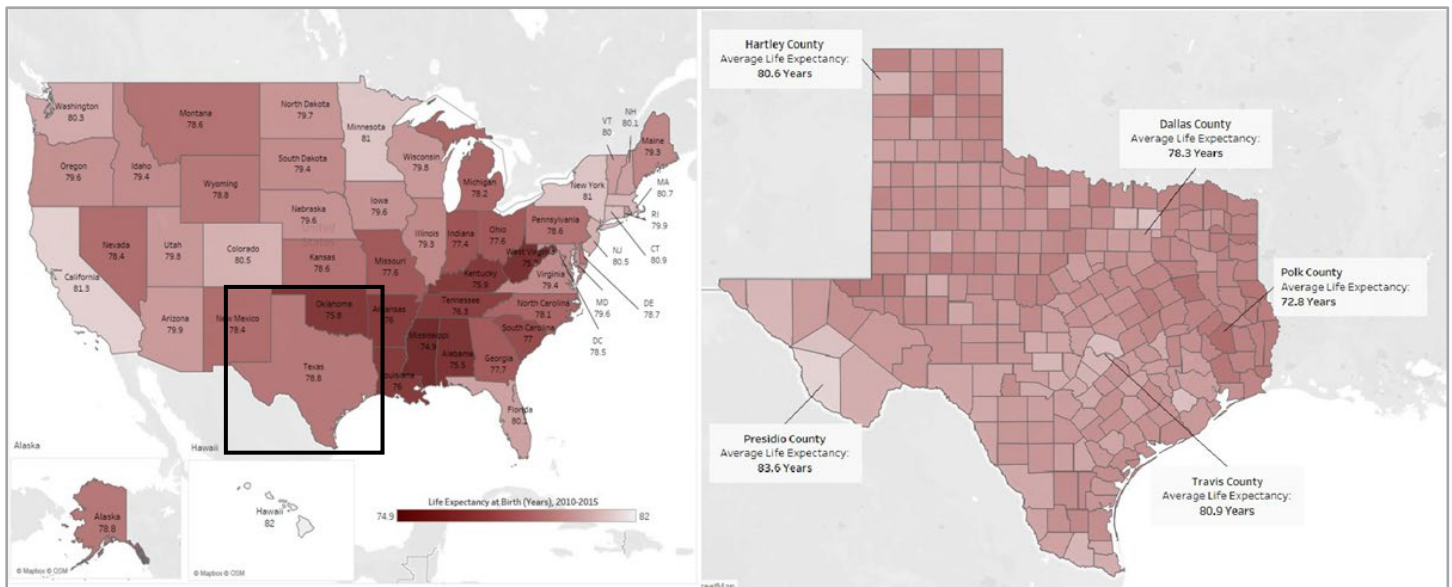

Racial health inequities persist among Black, American Indian/Alaska Native, Latinx, and Asian residents across the nation. Nationwide, 36 percent of all counties are at least 25 percent non-White. **In Texas, 79 percent of all counties (200 of 254 counties) are at least one-quarter non-White.**

Sources: County-level estimates retrieved from the American Community Survey 2018 *Race* datafile. Notes: Although the “non-white” categorization is used federally, some experts argue that the term Black, Indigenous, and People of Color (also known as BIPOC) is a more appropriate term than non-white.

Life Expectancy

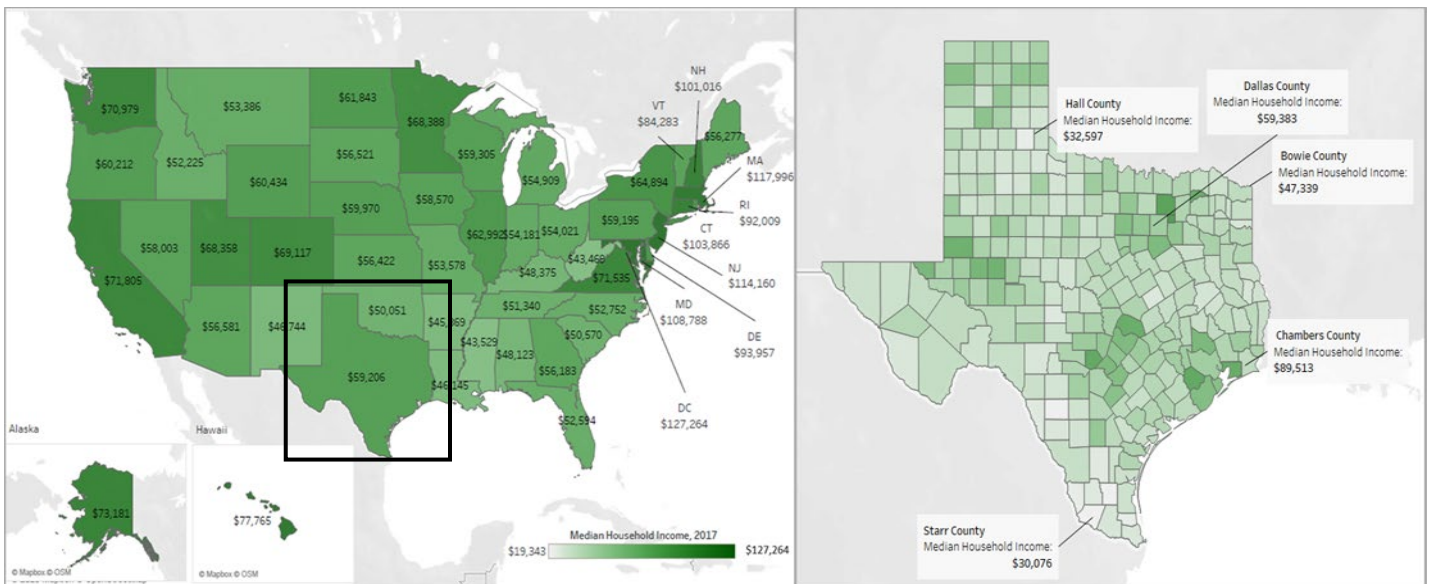

Life expectancy metrics can vary drastically by geography but are useful in examining how environmental, political, socioeconomic, and structural conditions impact health. **In Texas, the average life expectancy is 78.8 years, 0.3 years greater than the U.S. average life expectancy of 78.5 years.** In 200 of Texas's 254 counties, the average life expectancy is below the U.S. average.

Sources: State-level life expectancy data retrieved from Kaiser Family Foundation *Life Expectancy at Birth* data; county-level estimates retrieved from the National Center for Health Statistics *National Vital Statistics System (NVSS)* datafile.

Income

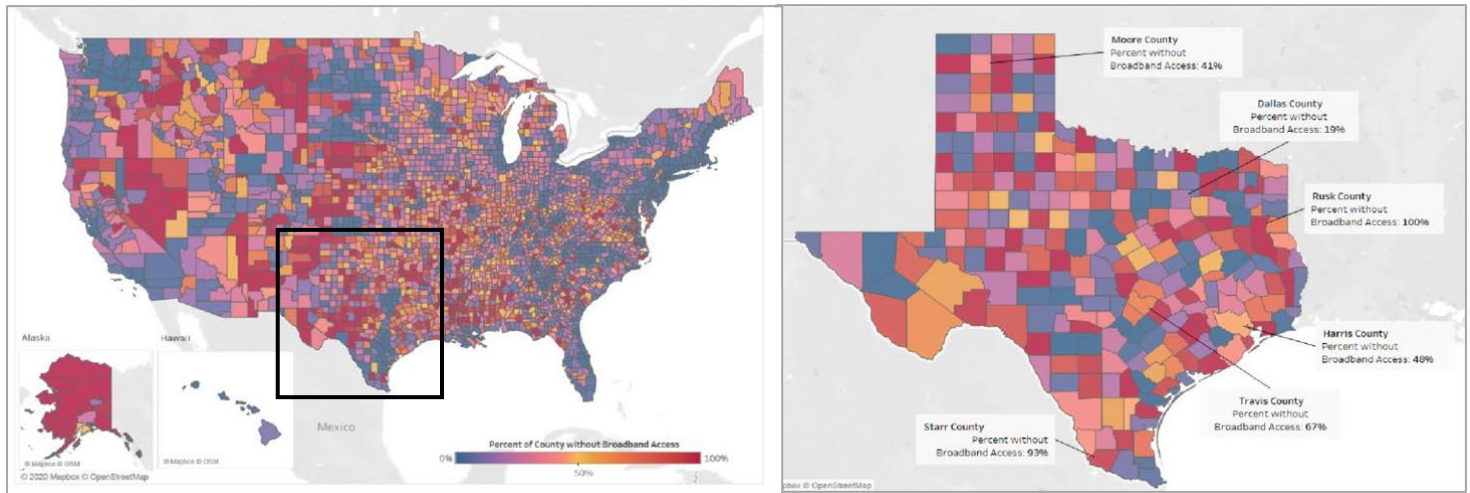

Higher income correlates with lower mortality and better health outcomes. **In Texas, the median annual household income is \$59,206, which is 1.9 percent lower than the U.S. median annual household income of \$60,336.** In 211 of Texas's 254 counties (83.1 percent of Texas's counties), the median annual household income is below the U.S. average.

Sources: State-level estimates retrieved from Kaiser Family Foundation *Median Annual Household Income 2017* datafile; County-level estimates retrieved from the United States Census Bureau *2014-2018 Median Household Income in the United States by County* datafile.

Broadband Infrastructure

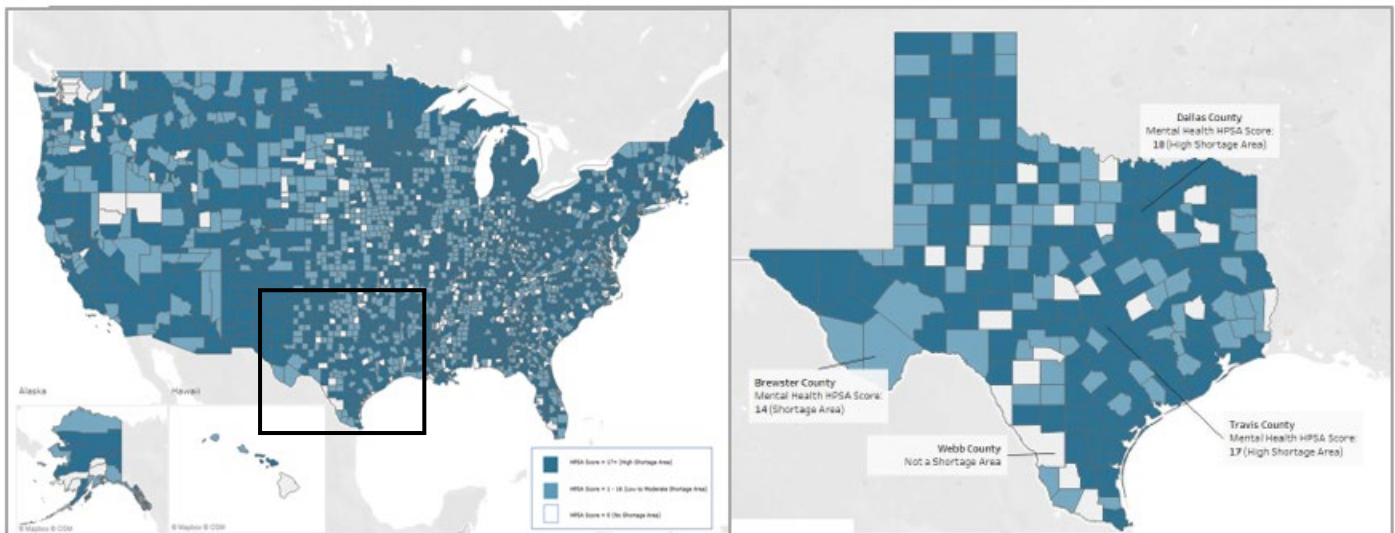

According to the Federal Communications Commission, 10 percent of U.S. residents lack access broadband – a trend that the Joint Economic Committee found to be more pervasive across communities of color. **Approximately 7.3 percent of Texas residents lack broadband access, compared to 6.5 percent of residents across the U.S.** In 104 of Texas’s 254 counties (40.9 percent of Texas’s counties), at least half of all county residents lack broadband access.

Sources: Federal Communications Commission (FCC) 2019 *Fixed Broadband Deployment* datafile.

Mental Health Workforce Shortages

The Health Resource and Services Administration (HRSA) designates geographic regions as health professional shortage areas (HPSAs) if they lack health care providers. Counties in Texas exhibit an average Mental Health HPSA score of 15.5 compared to the national average of 15.5 (on a scale of zero to 25, where 25 denotes an extreme HPSA shortage), **Thirty-two percent of Texas’s counties (82 of 254 counties) are designated as mental health HPSAs.**

Source: Health Resources & Service Administration *HPSA Mental Health* Datafile.

Notes: HPSA Scores are developed for use by the National Health Service Corps to determine priorities for the assignment of clinicians. Scores range from 0 to 25 for primary care and mental health. Larger scores correspond to higher priority areas.
